are trademarks of 3M or 3M Deutschland GmbH.
© 2020, 3M. All rights reserved.**ENGLISH****Product Description**
Ketac® Fil Plus Aplicap™ is a glass ionomer filling material in capsules. The following colors are available: A1/bright, A2/bright-yellow, A3/yellow, A3.5/brown, A4/yellow-brown, C2/grey, C3/grey-brown, DGO/dark-grey. Minimally 0.14 ml of the material are dispensable from each capsule. Details on all products mentioned below please refer to the corresponding Instructions for Use.**Instructions for Use**
Should not be discarded for the duration of product use.**Areas of Application**

- Class II and V fillings
- Wedge-shaped defects
- Class V fillings
- Pit-and-fissure sealings
- Restorative fillings prior to crown preparation
- Fissure sealing

Precautionary Measures
3M MSDS can be obtained from www.mmm.com or contact your local subsidiary.**Preparation**

- Remove the carious substance only, no undercuts required.
- Do not prepare thin edges since the material requires a wall thickness of 0.5 mm.

Pulp protection
In order to prevent irritations of the dental pulp, areas close to the pulp should be covered punctiformly with a calcium hydroxide preparation.**Conditioning**
For optimal chemical bonding to the teeth the smear layer produced in the preparatory steps must be carefully removed by applying Ketac Conditioner to the prepared surfaces and allowing the substance to react for 10 sec.**Then rinse with copious amounts of water.****Blow the cavity dry in only 2-3 short intervals with water and oil-free air or dry with cotton pellets. Do not over-dry! The cavity should be just dry so that the surface has a matt shiny appearance. Excessive drying can result in post-operative sensitivity after filling.****Avoid further contamination.****Activation**
Place the Aplicap® Activator on a sturdy surface and insert the Aplicap capsule in the activator.**Using the ball of your hands, depress the activator firmly and completely to the stop and hold it down for 2 to 4 seconds.****firmly and completely depressing the lever to the stop and holding it in this position is the only way to ensure that all of the liquid is pressed into the powder. If inadequate pressure is applied or if the lever is not depressed completely, it is possible that little liquid will be mixed with the powder, increasing the viscosity and changing the product characteristics.****Mixing**
Mix the capsules at approx. 4,300 rpm, in a high frequency mixing device such as CapMix™ (for 10 sec) or the Rotomix® rotating mixer (for 8 sec).**Application**
Apply with the Aplicap® Applier. Both the Aplicap Activator and the Aplicap Applier are color-coded in red.**Ensure that there is no contamination from water, saliva, etc. entering the working area for the entire duration of application; the working area must be kept dry.****Attention**

- Avoid any lag times between the processes of activation, mixing, and application, as the material is in the process of setting which may impair or prevent application of the material.

Ketac Fil Plus Aplicap sticks to metal instruments and should be washed off with cold water prior to setting.**Times**
At an ambient temperature of 23°C/73°F the following times apply:

Activation of capsule min:sec 0:02

Mixing with Rotomix 0:08

or

Mixing with high frequency mixing device such as CapMix 0:10

Processing from start of mixing 1:30

Setting from start of mixing 7:00

At ambient temperatures above 23°C/73°F the setting process is accelerated. Exceeding the indicated processing time may lead to reduced bonding to enamel and dentin.

Shorter mixing times prolong the processing and setting times, whereas longer mixing times shorten the processing and setting times. The mixing time may be reduced to 8-10 sec where high frequency mixing devices are used, and to 6-8 sec with the Rotomix device.

Filling protection

In the first phase of their 2-phase setting process, glass ionomers are sensitive to moisture. Subsequently, there is the potential for loss of strength which may be prevented by the use of vaseline and/or cotton rolls directly after modeling.

Apply vaseline to all exposed surfaces of the glass ionomer cement.**Finishing****Beginning no earlier than 7 minutes after the start of mixing, use Arkansas stone, fine-grain diamonds, polishing discs of decreasing grain size or silicone polishers for finishing.****Storage and Shelf-Life**

Store the product at 15-25°C/59-77°F.

Do not use after the expiry date.

Customer Information

No person is authorized to provide any information which deviates from the information provided in this instruction sheet.

Warranty

3M Deutschland GmbH warrants this product will be free from defects in material and manufacture. 3M Deutschland GmbH MAKES NO OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SI SLOVENŠČINA

Opis proizvoda

Ketac® Fil Plus Aplicap® je visokofrekvenčni restavracijski material pakiran v kapsulah. Na razpolago je v naslednjih varianah: A1/svetla, A2/svetlo rumena, A3/rumena, A3,5/rjava, A4/rumeni rjava, C2/siva, C3/sivo rjava, DGO/tmavo siva. Minimalna količina materijala, ki jo lahko iztegneš ne vse kapusle je 0,14 ml. Za podrobnejše informacije o materialih navedenih v besedilu glejte tem materialom priloženo navodila za uporabo.

Navodil za uporabo v času uporabe proizvoda ne zavrtite.

Področja uporabe

- Priprava III in IV razreda
- Klinični defekti
- Majhne plome in razreda
- Plome na mlečnih zobih
- Restavracija pred začetkom paracije za prevlek
- Zalivanje fisu

Previdnosti ukrepi

Varnostni listi 3M se dobjivo pod www.mmm.com ali pri vaši lokalni podružnici.

Priprava

- Odstranite le kariozne mase; spodrevanje sten ni potrebno.
- Material zahteva minimalno debelino stene 0,5 mm, zato ne delajte tankih sten.

Zaščita pulpe

Infacijo pulpe boste preprečili, če področja v njeni bližini natančno prekrjete s preparatom kalcijevega hidrokida.

Kondicioriranje

Za doseg optimalne kemične vezave materiala na zob, je potrebno opiklo (smear layer), ki nastanejo pri prepraciji zoba, previdno odstraniti s Ketac Conditioner-jem. Ketac Conditioner nameste na spreparate površine in pustite naj učinkuje 10 sekund.

Nato plome v oblo

Kavitevi posušite s postuperjem, tako da le 2-3 krat spinate z zrakom brez prmesi vode ali olj ali pa jo enostavno posušite v toplo kroglico. Ne presuši! Kavitevi naj bo toliko suha, da bo površina videti matrana.

Prekomeno sušenje se lahko kaže kot postoperativna preobčutljivost.

Izogibati se kasnejši kontaminaciji površine.

Aktivacija

Postavite Aplicap® aktivator na stabilno površino in vstavite Aplicap kapsulo v aktivator.

Z blazinco na dlanji aktivator trdno in do konca polnisite navzdol do končnega polozaja in jo tako pridržite, da tekočina v celoti iztisne na prah. Če rečice ne prisotivate podljo močno ali dolj dole, se lahko zgodi, da se bo prah pomešal s premalo vodo in v Rotomixu od 6 do 8 vtefin.

Ohrana výplné

Sklonometriji procházejí dvěma fázemi tvrdnutí. V první fázi toho dovolujiče hromadného tvrdnutí procesu reagují na vlnách. Proto existuje nebezpečí dehydratace, kterému je možno předejít použitím vazelíny a/nebo vatových tamponů.

► Okamžitě po modelaci aplikujte vazelínu na všechny odkryté plochy sklonometričního cementu.

Konečná úprava

► Postavite Aplicap® aktivator na stabilno površino in vstavite Aplicap kapsulo v aktivator.

Z blazinco na dlanji aktivator trdno in do konca polnisite navzdol do končnega polozaja in jo tako pridržite, da tekočina v celoti iztisne na prah. Če rečice ne prisotivate podljo močno ali dolj dole, se lahko zgodi, da se bo prah pomešal s premalo vodo in v Rotomixu od 6 do 8 vtefin.

► Použijte aplyzou, aplikujte vazelínu znova po započetém povrchu.

► Použijte aplyzou po uplynutí data expirace.

Informace pro uživatele

Zářína osoba nebyla pověřena k tomu, aby poskytovala jakékoli informace išli se o těch, které jsou uvedeny na lomtu příbalovém letáku.

Práva

► Vedno posušujte prepreti nepotrebito zamujanje (čakanje) med aktivacijo, mešanjanjem in nanašanjem, ker se bi proces strjevanja začel in potem bo nanašanje otetno ali celo nemogoče.

► Ketac Fil Plus Aplicap se lepi na kovinske instrumente. Zato jih je potreben, še preden se ostanki streljajo, očistiti z mrzlo vodo.

Casí

Naslednji časi veljajo pri temperaturi zraka 23 °C/73 °F:

Aktivacija 0:02

Mešanje v Rotomix-u 0:08

ali

Mešanje v visoko frekvenčnem mešalcu; na primer CapMix 0:10

Delovni čas do začetka mešanja 1:30

Čas strjevanja od začetka mešanja 7:00

Čas strjevanja se pri temperaturi nad 23 °C/73 °F skrajša.

Sprememba časa strjevanja bodo negativno vplivala na adhezijo materiala na sklenino in dentin.

Krajsi časi mešanja bodo podprtali, dejanski pa skrajšali delovni in strjevalni čas.

Mesnični čas je lahko od 8 do 10 sekund pri mešanju v visoko frekvenčnih mešalcih ter od 5 do 8 sekund pri mešanju v Rotomix-u.

Zaščita plome

V prvji fazici difuzivnega procesa strjevanja se glasionomejni cement občutljivi na vlagi. V drugi fazi pa obstaja nevarnost dehydratacije, ki pa jo lahko preprečite, če plombo takoj po obdelavi zaščitite z vazelino in mal zvitki vate.

► Vazelín na površini vse izpostavljenje površinom je sklonem kontaminaciji.

► Po zanj lahko vazelín ponovno hanete (da zanjite površino).

Strjevanje in rok uporabe

Proizvod strujejo pri temperaturi 15–25 °C/59–77 °F.

Ne uporabljajte po preteku roka uporabe.

Informacije za kupca

Nobena se nima pooblastila za posredovanje kakršnikoli informacij, ki odstopajo od informacij v tem navodilu.

Garancija

3M Deutschland GmbH jamči, da bo ta izdelek brez napak v materialu in izdelavi, 3M Deutschland GmbH NE DAJE NOBENIH DRUŽIH JAMSTEV, VKLJUČNO Z NAZNANCIJAMI JAMSTV J AL JAMSTV ZA PRODAJO AL PRIMEROST ZA DOLOČENIM NAMENOM. Uporabnik mora sama predložiti, ali je izprodvod primeren za določeno uporabo. Če se ta izdelek pokvari v garancijskem obdobju, bo vaša izklopčna odškodnina in obveznost družbe 3M Deutschland GmbH, da popravi ali zamenja svoj izdelek.

Omejitev odgovornosti

Kromči pripadajočim zákonem nebebu firma 3M Deutschland GmbH odgovorna je za jekoliki strati ŷ poškodeni tohto produktu, ať již prívom, nepřímou, zvláštnou či následnou, bez ohledu na dozložený tvrzení, včetně záruky, smlouvy, nedbalosti či prime odpovědnosti.

► Pokud je výrobek poškoden, je treba ho ihned vrátit výrobkovi.
