## PRECISION & PERFORMANCE

Addition silicone for master impression

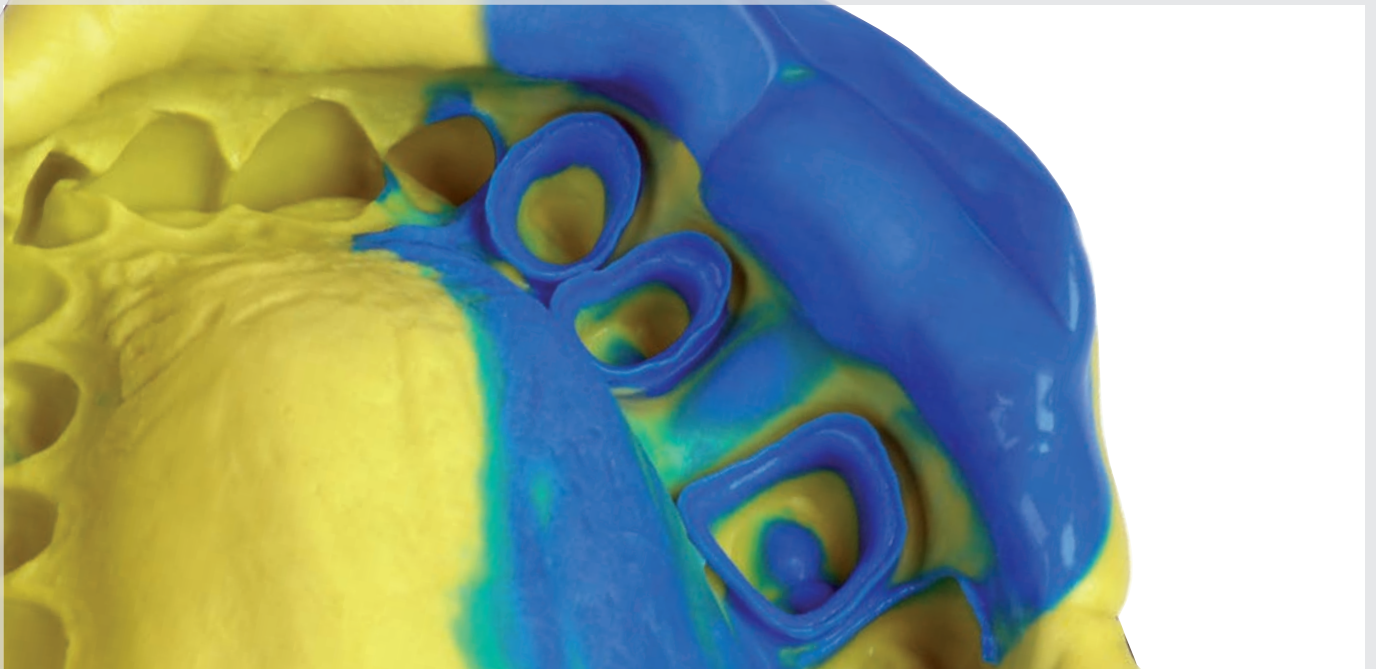

**Zhermack**   
Dental

# Elite P&P, precision & performance

**Elite P&P**, Precision & Performance, is a versatile, immediate and easy to use line of A-Silicones impression material.

The three viscosities: putty, light and regular, satisfy dental requirements in different clinical situations.

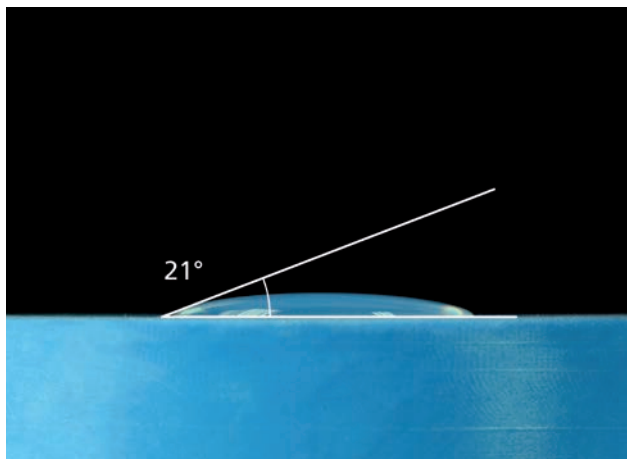

**Elite P&P** is particularly recommended for current users of C-Silicones who would like to upgrade to a more precise, high-performance impression system.

# Precision

## Hydrocompatibility and definition at high levels

The **hydrocompatible behaviour** of **Elite P&P Light** and **Regular** allows professionals to **reach the gingival sulcus easily**, even in the presence of oral fluids, allowing impressions to be taken with a greater level of detail than conventional C-silicones.

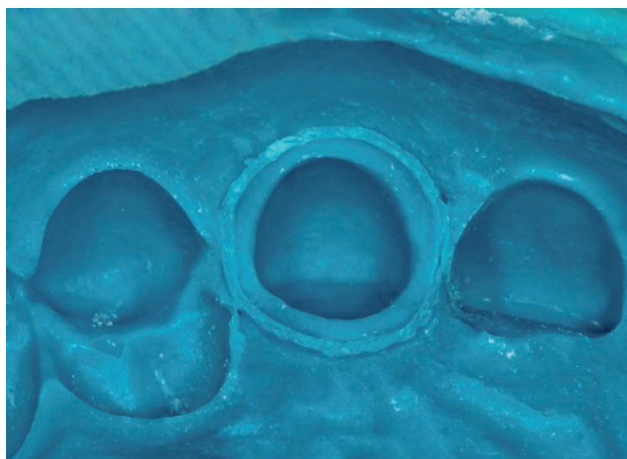

Contact angle

## Smooth application

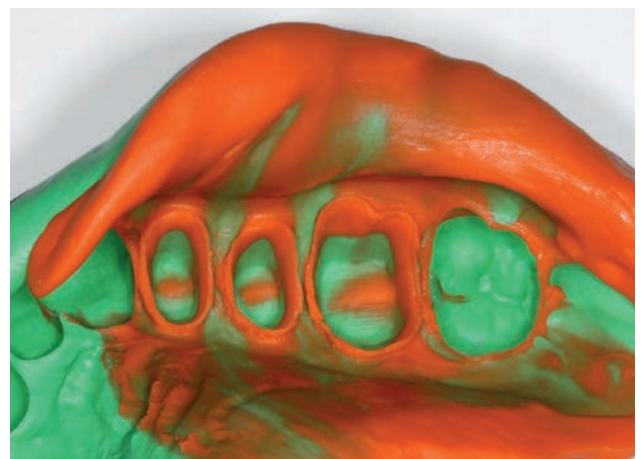

The **Light** and **Regular** viscosities of **Elite P&P** smoothly adapt inside areas which are difficult to reach when subjected to pressure. They also do not slump.

Elite P&P does not slump (Elite P&P Light Fast)

Definition of the detail (Elite P&P Light Normal)

The result of the smooth application of Elite P&P Putty and Light Fast

# Performance

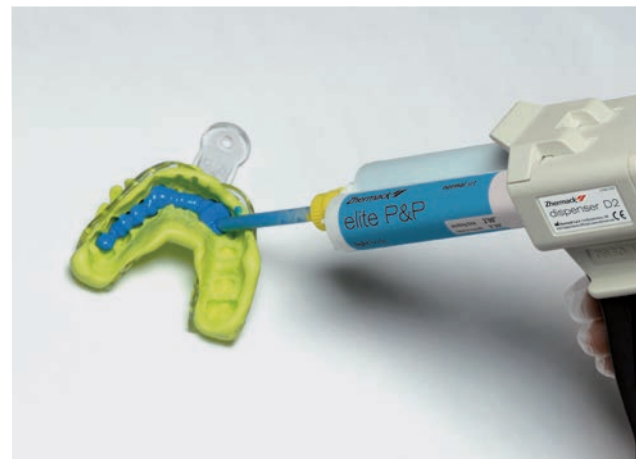

## Easy handling formula

The **1:1 ratio** between base and catalyst simplifies **the manual mixing of putty and washes** in tube versions. This offers the advantage of having a **constant consistency** throughout the working time. Automix cartridges are available for **Light**

**Body (normal and fast set) and Regular Body (normal set)**. This allows the materials to be quickly extruded and save time.

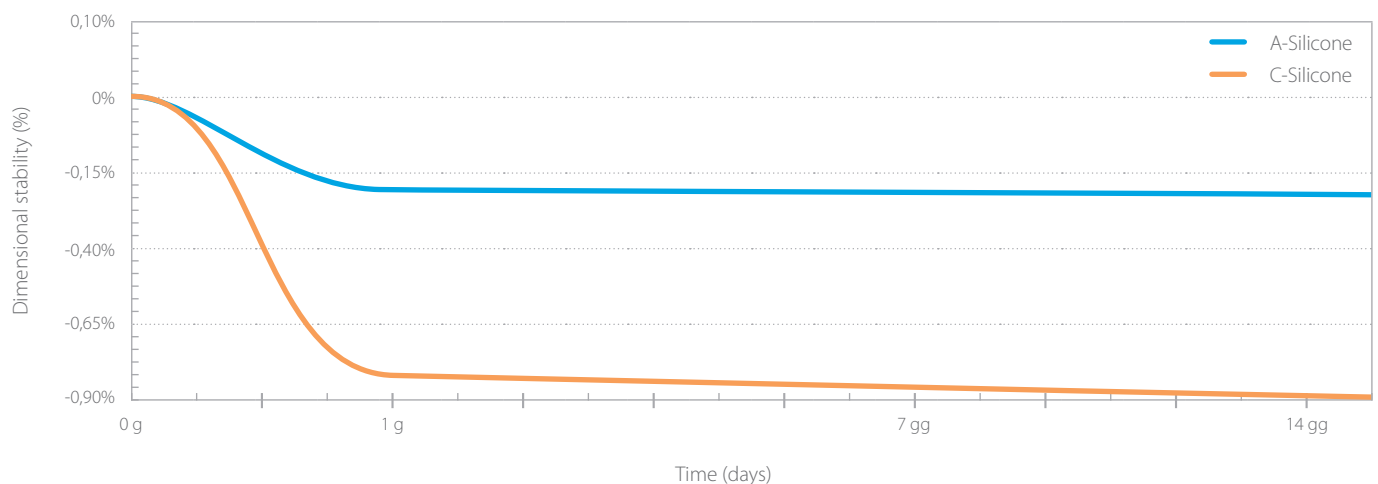

1:1 Ratio simplifies the manual mixing

Precise and fast extrusion

## High dimensional stability

The impressions took with **Elite P&P**, remain more stable over time than those obtained with C-Silicones, allowing **accurate models** to be obtained, even if cast two weeks after the impression has been taken.

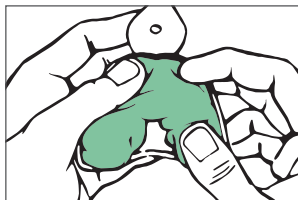

## Clinical indications for different impression techniques
