

Saliva Ejectors & Aspirator Tubes

By **ORSING**

Orsing is one of the world's leading producers of saliva ejectors, aspirator tubes and accessories. Founded in Sweden in the 1950s, Orsing has distinguished itself for user-friendly disposable products developed with the patient's highest comfort in mind, such as the Hygoformic, the world's best known mouldable saliva ejector.

ORSING

4

reasons to use Hygoformic®

Adjustable

The Hygoformic is seamlessly adjustable in shape and size to any patients cheek and also works very well when treatment is needed at the back of the jaw.

Environmental friendly

The material in Hygoformic is a non-toxic and non-pollutive mixture of PE and PP. When the plastic is totally burnt all that will remain is water and carbon-dioxide. No phthalates – no latex.

High capacity and tissue friendly

The Hygoformic has a high suction capacity due to the 5 holes. The holes are placed inside the coil design to avoid contact with the tongue and soft tissues and will not become blocked.

Tongue holder

The Hygoformic is a combined saliva ejector and tongue holder. The coil design of the tongue holder makes Hygoformic patient friendly.

New colours: lime green, light blue and pink.

Hygoformic®

The Hygoformic is the original mouldable saliva ejector with tongue holder. Used by dentists all over the world for more than 50 years. Produced in non-toxic and non-pollutive polyethylene and polypropylene and a complete line of adaptors to meet all the requirements of modern dental clinics.

Insert an Hygoformic saliva ejector into standard ejection system. Use a suitable adaptor for Hygoformic if necessary.

Stretch the Hygoformic saliva ejector to suit the patient's anatomy. The saliva ejector is adjustable and can be stretched and bent to suitable shape multiple times.

The Hygoformic saliva ejector should stay in place without hurting. If the patient experiences discomfort, the Hygoformic saliva ejector should be loosened.

Choose an aspirator tube from the wide range produced by Orsing for optimal suction and to keep the surgery area clean and dry. All Orsing's saliva ejectors and aspirator tubes can be used with a flexible AdaptaPal (Directa) for better access from all angles and minimum strain on operator's shoulders and arms.

4

reasons to use aspirator tubes

Hygovac® dual tips: S-shaped and 45°

The Hygovac range of aspirator tubes consists of Hygovac and the ventilated Hygovac Vent. The dual tips give the freedom of choice also in the autoclavable versions Hygovac Green and Hygovac Vent Green.

Patient and environmentally friendly

All aspirator tubes are manufactured in an environmentally friendly PE or PP. When the plastic is totally burnt all that will remain is water and carbon-dioxide. No phthalates - no latex.

Ventilation hole

The Hygovac Vent is equipped with double holes on each end which strongly reduce the effect of getting stuck. The Scantube Vent is equipped with a rectangular ventilation hole.

Multi colours

The Scantube range of aspirator tubes is available in 11 colours.

Disposable aspirator tubes.

Orsing's wide range of disposable aspirator tubes fit any evacuation system. Besides the standard selection of models and colours, Orsing manufactures aspirator tubes in any length, design or colour to meet customers' needs.

4

reasons to use Hygovac[®] Bio

Made of renewable resources

The sustainable material in Hygovac Bio is built up by absorbed CO₂ from the atmosphere. The same amount of CO₂ that is used in manufacturing the product is released when the product is recycled at the end of its cycle, keeping the carbon in the system.

Introducing a shorter aspirator tube

Hygovac Bio is available in two new sizes, 120 mm and an even shorter version of 95 mm. Still having the same diameter and suction as before but with the opportunity to broaden application of use and with environmental purposes in mind. Less material is used and less storage space is required in the clinic.

Fossil free

Hygovac Bio is made from renewable resources that make a significant contribution to saving and reducing the use of fossil resources and the level of greenhouse gas emissions. Produced from ethanol sugarcane Hygovac Bio is manufactured as a renewable raw material while traditional polyethylene uses fossil sourced raw materials such as oil or natural gas. This saves about 80% CO₂ compared to ordinary plastic.

Customize after treatment

The shorter aspirator tube gives the option to choose a length which suits the treatment. Hygovac Bio Short is ideal for hygienists and will give an easier access when working without assistance.

Length: 120 mm and 95 mm.
Material: Biobased Polyethylene
Manufactured in HDPE
Carton of 10x100 pcs

Prod No: B1000 Hygovac Bio, white

Prod No: BS1000 Hygovac Bio Short, white
Prod No: BS1000LG Hygovac Bio Short, lime green

Hygovac® Bio **New fossil free aspirator tubes** **manufactured from renewable resources**

Hygovac Bio is a range of aspirator tubes made of renewable resources, developed to save and reduce the use of fossil resources and the level of greenhouse gas emissions. Taking the necessary steps towards a more sustainable future it is important that future plastic materials are made from renewable raw materials as well as resource efficient, recyclable and safe from both a health and environmental aspect.

Hygovac Bio is now available in two new sizes, providing an opportunity to broaden the application of use. The aspirator tube still has the same diameter and provides the same suction as previous Hygovac products. The shorter version is 95 mm and provides the option to choose the right length for each specific treatment. It is ideal for hygienists and will give an easier access when working without assistance.

Besides the new Hygovac Bio the Hygovac range of aspirator tubes consists of Hygovac and the ventilated Hygovac Vent. The dual tips, with one traditional 45° end and one S-shaped, give the freedom of choice and increased patient comfort. With the new sizes, less material is used producing the product.

Autoclavable aspirator tubes & accessories.

Orsing's line of autoclavable products. Both the long and the short autoclave program are suitable (max 140° C). The tips Hygosurge, Hygojet and Hygotip as well as the disposable angle fit all our aspirator tubes.

4

reasons to use Hygosurge® XL

Ideal for surgical treatments

The Hygosurge XL works directly in the 11 mm system and is ideal for surgical treatments.

Environmental friendly

The Hygosurge XL is manufactured in a non-toxic and non-pollutive PP.
No phthalates – No latex

Autoclavable

The Hygosurge XL can be autoclaved on both the long and short program on max 140° C before use.

Precision tip

The Hygosurge XL has an apex of 3,6 mm. For micro oral surgery and fine endodontic work we recommend to use a combination with Microtip with an apex of 1,7 mm.
